

Erosion Management Info Session

For Fitzroy Graziers and Growers

Erosion can strip land of valuable topsoil, decreasing productivity and creating gullies. This info session will help land managers in central Queensland prevent and heal erosion on their land. Explore what others have done on their CQ properties to repair waterway erosion and access expert advice, strategies and solutions from a soil conservation experts.

Guest speakers

John Day

SENIOR SOIL CONSERVATION OFFICER

John has helped many CQ land managers heal their eroding land. He is a soil conservation expert with many years of experience working throughout Queensland in cropping, grazing and horticulture.

Ross Newman

PASTURE AGRONOMIST

Ross will be addressing how you can optimize your pastures to reduce soil loss and sediment run-off. Born in Rockhampton, Ross has worked with tropical and subtropical pasture system agronomy for the past two decades. Ross has a wealth of experience surrounding pasture productivity, management, and identifying potential solutions to commonly occurring problems.

Braden Mitchell

FBA LAND MANAGEMENT OFFICER

Braden is FBA's Waterways Management Officer. With several years of industry experience Braden has a vast knowledge of water quality management, erosion management, riparian restoration and safety. Braden leads many waterway erosion control projects at FBA and is passionate about finding productive, cost-effective solutions.
