Join like-minded Fitzroy extension officers and land managers for an informative and interactive forum where you will mingle with leading regional scientists and experts.

Since 2009, the Paddock to Reef program has measured and reported on water quality factors that impact the health of the Great Barrier Reef. Central Queensland extension officers and land managers play an important role in this program through on-ground action and data collection. This event is an opportunity to learn more about the fascinating multi-faceted project and how it contributes to improving Reef health and recovery management actions.

The day includes bite-sized presentations about different components for the Paddock to Reef program plus a field tour to a completed large-scale sediment saving project.

Guest Speakers

Carl Mitchell (Department of Environment and Science)
A Paddock to Reef program overview

Leigh Stitz (Fitzroy Partnerships River Health)
The value of collaboration

Meg Bickle (Department of Environment and Science)
A human perspective

Adam Northey (Department of Agriculture and Fisheries)
History of management practice & update on program targets

FBA
Project design, delivery and multi-outcome approaches ... and more!

This event is hosted by Fitzroy Basin Association as part of the Paddock to Reef program, jointly funded by the Australian and Queensland governments.
