Are you passionate about creating a healthy, productive grazing system?

We have the opportunity to support local land managers in the Fitzroy region who want to improve their land through restoration and regenerative practices. These efforts will benefit biodiversity in the long run and help your grazing system thrive!

Project works can involve:

- Improved infrastructure (fencing, watering points etc.)
- Erosion control
- Weed management
- Pasture improvement
- Land management upskilling
- Fire management
- Planting and natural regeneration work
- Pest and weed control
- Installation of key habitat features (nestboxes, rock piles, animal friendly watering infrastructure)

Projects can be tailored to suit your business sustainability plan or support you in creating one with financial support available!
