- 2.6.12 Each Tenderer that has not been shortlisted will be notified by FBA that its Tender has been unsuccessful.
- 2.6.13 FBA is not obliged to publicise the name of the shortlisted Tenderers, but it may do at its discretion.

#### **Conflict of Interest**

- 2.7.8 Tenderers warrant that, except as notified to FBA under clause 2.5.8, at the time of submitting their Tender, no conflict of interest exists, or is likely to arise, which would affect the performance of their obligations of any contract that may be entered into with FBA arising out of this ITT.
- 2.7.9 In the event of a conflict of interest being identified FBA may, in its sole and absolute discretion, exclude the Tender from any further consideration.

## Negotiations

- 2.7.10 Acceptance of a Tender may be subject to negotiations at the sole and absolute discretion of FBA. In any negotiation process, FBA may require the submission of any additional written documents or information that may be required for the purposes of the contract to be entered into under this ITT.
- 2.7.11 Without limiting its other rights under this ITT if, in the sole and absolute opinion of FBA, during final negotiations a Tenderer has retracted, or attempts to retract, representations under which material business, financial, technical and legal issues were resolved during negotiations, FBA may reject the Tender, discontinue negotiations with that Tenderer, and exercise any other right FBA has under this ITT, at law or otherwise.

## No Liability

- 2.7.12 This ITT process does not form a process contract. FBA, its officers, employees, agents or advisors will not be liable in contract or tort or in any other way for any direct or indirect damage, loss or cost incurred by any Tenderer or other person in respect of this ITT process.

## Queensland law

- 2.7.13 The laws of Queensland shall govern this ITT and each Tenderer agrees to submit to the exclusive jurisdiction of the Queensland courts, including arbitration and mediation, in respect of any dispute concerning this ITT or the ITT process.

## 2.8 Acknowledgement by Tenderers

- 2.8.1 Every Tenderer accepts that the Tenderer:
- has not relied, and will not rely, upon any FBA-Supplied Information for any purpose (including determining whether or not to lodge a Tender, preparing its Tender, entering into the Contract or performing its obligations under the Contract);
  - has been or will be provided with FBA-Supplied Information only for the Tenderer's convenience and FBA does not assume any responsibility or duty of care in respect of, give any warranty or guarantee or make any representations as to, FBA-Supplied Information (including its accuracy or adequacy);
  - shall have no claim of any kind whatsoever and howsoever arising against FBA or any employee, agent or contractor of FBA (whether in contract, tort (including negligence), equity, under statute or otherwise) from or in connection with FBA-Supplied Information (including the provision of, or failure to provide any FBA-Supplied Information); and
  - must satisfy itself as to and take into account any matter or thing disclosed by any FBA-Supplied Information relevant to the Tender and the carrying out of the Contract Work.
- 2.8.2 The Tenderer shall have no claim of any kind whatsoever and howsoever arising against FBA or any employee, agent or contractor of FBA (whether in contract, tort (including negligence), equity, under statute or otherwise) arising from or in connection with:
- any costs, expenses or other liabilities incurred by the Tenderer in preparing a Tender or otherwise in connection with the Tenderer's Tender (whether or not a Tender is lodged by the Tenderer or the Tenderer's Tender is accepted) including any costs, expenses, or other liabilities incurred by the Tenderer in providing any further information or in carrying out any further work at the request of FBA or any of its employees, agents or contractors;

- b. FBA or any of its employees, agents or contractors exercising in its absolute discretion, any discretion or right it has under this ITT or in connection with the Contract Work; and/or
- c. any of the matters or things relevant to the Contract Work in respect of which the Tenderer must satisfy itself under this ITT.

## Part 3: Evaluation of Tenders

### 3.1 Evaluation Process

#### Evaluation panel

The objective in evaluating each Tender is to obtain the best value for money and not necessarily the lowest Tendered price. If FBA considers any Tender to be ambiguous, erroneous or incomplete, FBA may in its absolute discretion:

- a. consider, or refuse to consider, the Tender;
- b. request further information from the Tenderer; or
- c. request the Tenderer to amend its Tender.

Tenders will be evaluated by a panel of staff chosen for their relevant experience. Evaluation will take place against the Evaluation Criteria outlined in Section 3.2.

#### Tenderer debrief

Following the successful awarding of the ITT (if any) FBA will offer to debrief the Tenderers who have not been successful. The debrief will be conducted by teleconference or email as requested. The debrief will aim to:

- a. provide the reasons why a Tender was not successful;
- b. explain how the Tender performed against the evaluation criteria, i.e. the strengths and weaknesses of the Tender; and
- c. answer any relevant concerns or questions from the respective Tenderers.

Tenderers should keep in mind the terms of this ITT regarding confidentiality and privacy considerations when requesting information during the debrief. FBA will not provide any information that is comparative to the successful (or any other) Tender or any other commercial-in-confidence information.

### 3.2 Evaluation Criteria

## Part 4: Scope of Works

### 4.1 Introduction

FBA has an outstanding reputation locally, across Queensland and nationally for developing and delivering effective and efficient programs that work with the local community, stakeholders, and investors to protect our region's natural assets. FBA is uniquely placed geographically, strategically, and operationally to deliver priority environmental and agricultural outcomes.

FBA is the organisation that can bridge the gap between knowledge and action, and bring projects that combine environmental awareness, increased profitability, and improved production to life.

We are the experts of our region. We translate complex information - explaining legislation, new technologies and changes in best practice in a way that becomes tangible, practical actions land managers and the community can do. We work with all parts of our community to implement evidence-based, accessible solutions that are relevant to our region.

FBA is proud to be one of Queensland's leading natural resource management organisations.

When it comes to the environment, landholders and our local community, FBA is well-placed to lead and support projects that protect the future prosperity and resilience of our land and sea.

Fitzroy Basin Association's (FBA) streambank remediation project is funded through a partnership between FBA and the Queensland Government's Disaster Recovery Funding Arrangements (DRFA) Environmental Recovery Program.

This scope of works involves the planting of 3,643 tubestock for the Fitzroy River (Bindaree) streambank rehabilitation site at Garnant (Lat/Long -23.112116, 150.242427), covering approximately 1.8 hectares. Additionally, the project includes the ongoing maintenance of the site until June 2025 to support successful revegetation efforts and provide long-term protection from erosion in this actively eroding section of the Fitzroy River. The revegetation maintenance program may be extended to December 2026. These works will need to be quoted for separately.

A KML file will be included as an attachment that shows the project area.

Figure 1: Screenshot of the KML file showing site extents

## 4.2 Project tasks

The scope of work encompasses, but is not confined to:

- **Supply:** Procurement, collection, and delivery of all required components and materials, excluding the purchase of tubestock, which will be supplied by the Rockhampton Regional Council Nursery. The contractor is responsible for collecting the tubestock from the nursery and ensuring their safe transport to the site.
- **Confirmation of Existing Services:** Obtain and verify information on existing underground services through Dial Before You Dig and ensure all services are correctly located.
- **Locating and Protecting Existing Services:** Locate and protect all existing services during installation.
- **Planting and Watering:** Implement planting methodology. Ensure plants receive adequate water post-planting and monitor and adjust watering as necessary. Regular irrigation will be required during the establishment period, with ongoing maintenance to follow.
- **Maintenance:** Implement a maintenance program that includes regular weed control, supplementary watering, irrigation system upkeep, and minor erosion rectification. The program will extend until June 2025, with specific tasks and frequencies outlined as a guide to ensure the success of the revegetation efforts. An extension to the maintenance program will be confirmed by the program manager.
- **Site Restoration:** Restoring the site to a standard not less than what existed prior to the site establishment period.

### 4.3 Planting Overview

The scope of works consists of the planting of 3,643 tube stock and their initial maintenance at the Fitzroy River (Bindaree) site. The following project brief outlines specific information and methodologies recommended to understand for successful implementation.

Table 1: General Planting Details

<b>Plant Order</b>	FBA ordered the tube stock from Rockhampton Regional Council Nursery (Charles St, Rockhampton)
<b>Plant delivery</b>	Tenderer to collect daily inventory of plants and deliver to site for planting.
<b>Soil Information</b>	The topsoil encountered has a light texture, ranging from sandy loams to clay loam with a neutral pH. The subsoil also varies from sandy loams to clay loams and is neutral to slightly alkaline.

#### General Planting Advice

- Planting and watering methods must be monitored during and after planting.
- The subsoils are clay loams with good water retention. Ensure water soaks into the soil effectively to support tubestock, minimizing runoff. Refer to the attached geotechnical report for detailed soil analysis. The subsoils are likely to be extremely rapid draining due to sand and gravel content. Adjust the watering rate and frequency based on visual assessment of plant stress.
- Ensure correct distribution/location of plant species at the time of planting. The contractor/site supervisor must recognize each species and follow the planned location and density.
- Adequate moisture in the root zone is critical for tree survival and growth. Ensure proper watering from the nursery to the planting site.
- Effective dispersal of soil into the potting mix at planting time is essential to prevent water repellences and ensure plant roots can grow without encountering dry airspaces.
- The lower bank (0.524 ha) will be covered with coir matting

#### Planting Depth and Hole Design

- Ensure plant roots receive adequate water at planting and post-planting. Use a hole design and planting depth that retains water around the plant.
- Tree tubestock holes should be approximately 400mm deep with a diameter similar to a post-hole shovel. For Lomandra, grasses, and sedges, holes should be 200-300mm deep.
- Prepare holes prior to planting in each section according to specified spacing for location.

### **Plant Species Distribution and Planting Layout**

- Plant in rows where possible for easier maintenance and monitoring.
- Select and distribute plant species consistent with the planned density and species ratios for the area.
- Randomly distribute tree species in each area to avoid clustering.

### **Planting Methodology and Follow-Up Maintenance**

- Fully wet potting mix at planting by submerging in water with seaweed extract until no further air is released.
- Remove plants from tubes using good technique to avoid root disturbance. Trim extending roots if necessary.
- Plant tree tubestock 400mm deep, backfill with topsoil, and leave a substantial depression around the tree to capture water.
- Lomandra and grass tubestock should be planted 200-300mm deep, with a shallow well around the plant.
- Fertilizer may be added before planting or within the backfill to enhance growth rate.
- Water trees with at least 20L of water within 1 hour of planting, ensuring all water is retained in the planting hole.
- Reduce water volume for Lomandra 5-10L.
- Monitor plants regularly and rewater with at least 20L when moisture stress is apparent. Apply follow-up water 2-7 days after planting unless there is good soil moisture or rainfall.
- Apply water slowly to ensure absorption around plant roots.

### **Reseeding**

- Throw seed over all areas where groundcover has been reduced from irrigation and tree planting, includes walking/driving tracks, pipeline trenching.

### **Optional Measures**

- Mark each tree location with a durable stake for easier maintenance.
- Consider applying mulch around the base of each plant to help retain moisture, suppress weeds, and protect the roots.

#### 4.4 Maintenance Overview

Handle both the establishment and the ongoing maintenance of the revegetation works on the site, ensuring their success until June 25 with a possibility of an extension. This includes carrying out necessary tasks and monitoring to prevent any failures in the revegetation effort.

<b>Expected Maintenance Period</b>	January 2024 until June 2025
------------------------------------	------------------------------

#### Irrigation Operation

An intensive irrigation schedule is planned for the 12-week establishment period and a follow-on 12-week maintenance period until June 2025. Extension irrigation events would continue monthly until December 2026 or until further notice. Irrigation frequency may be adjusted by the Project Manager to fit prevailing drought and moisture conditions.

#### 4.5 Establishment Maintenance

The establishment maintenance period is assumed to be 12 weeks, beginning one week after the completion of planting.

During this post-establishment maintenance period, the Contractor will be responsible for the site maintenance tasks and frequencies detailed in Table 2.

Table 2: Establishment Maintenance Task Frequency

All Zone Establishment maintenance	Week											
	1	2	3	4	5	6	7	8	9	10	11	12

Irrigation Schedule	2	2	2	2	2	2	2	2	2	2	2	2
Irrigation Maintenance	1	1	1	1	1	1	1	1	1	1	1	1

#### Weed Control

The site contains a range of declared invasive and environmental weed species. Emerging weeds should be monitored, and spot sprayed or mechanically removed at the earliest opportunity. Four site treatments during the establishment maintenance period are planned. Selective herbicides should be used for manual spot spraying, aiming to control weeds while avoiding preferred sown germinant and seedlings. Ensure groundcover is not minimised during spraying – lost groundcover creates a large risk of erosion occurring.

#### Supplementary Watering (As Directed)

Supplementary watering events may be directed by the Project Manager. The Contractor should monitor the drought tolerance of emerging grasses, pasture, legumes, and tube stock and apply water via the irrigation system

to deliver at least 6mm per hectare at each event. Caution should be exercised to ensure overland flow does not occur. Note: This is different to the 20L of watering per plant post planting.

### **Minor Erosion Rectification (As Directed)**

During the establishment maintenance phase, the Contractor will undertake minor erosion rectification works by employing the following strategies:

- Controlling the source of the erosion (e.g., concentrated flows)
- Adding topsoil, and (if necessary) mulch
- Straw mulch bales
- Additional seed sowing or fertilizers
- Erosion control geofabrics (if necessary)

The Contractor shall adopt the approaches outlined in the IECA Best Practice Erosion and Sediment Control Guidelines when implementing any temporary or permanent erosion and sediment controls. Major soil loss from flooding or major storm events will be dealt with separately.

### **Re-sow / Refill**

Before the commencement of Week 12, the Contractor shall (if directed by the Project Manager):

- Apply and incorporate additional seed mix
- Plant additional seedlings

## **4.6 Revegetation Maintenance**

The Contractor will maintain the site for a further 12 weeks after the completion of Establishment Maintenance. During this post-establishment maintenance period, the Contractor is responsible for the site maintenance tasks and frequencies detailed in Table 3 (please note – establishment maintenance takes you through to Month 3).

Please note: The revegetation maintenance program may potentially be extended to December 2026. The contractor will be responsible for the site maintenance tasks and frequencies that are detailed in Table 4 and Table 5. These works will need to be quoted for separately.

The maintenance program is dependent on the success of the direct seeding and tubestock planting programs, and their resulting density and complexity. The better the initial germination/survival, the less the impact that introduced weeds will have.

If grasses become a problem within the planted trees and shrubs, herbicides such as Verdict or Fusilade™ should be used as a spot spray (1m radial) to remove grass competition. Verdict can be applied over the top of seedlings if necessary. Herbicide should be used sparingly to minimize impacts on ground cover. Other woody weeds should be controlled regularly, aiming to prevent emergent weeds from setting seed.

#### 4.7 Provision of Extra Supplies

The Contractor is expected to cover the cost of herbicide and small irrigation parts within the contract. However, any additional supplies required to carry out tasks, such as significant irrigation system components, extra seedlings, or large quantities of mulch, will be considered an additional cost. These additional costs must be pre-approved by the Project Manager and will be invoiced separately.

#### 4.8 Monitoring

The Contractor will monitor the site and report on progress. The following simple steps should be followed:

- Monthly Site Visit: Visit the site monthly to check overall condition.
- Photos: Take photos of the site from the same spots each visit.
- Checklist: Use a simple checklist to note:
  - Weed presence and control actions taken.
  - Watering events and conditions.
  - Erosion issues and rectification actions.
  - Seedling survival and replanting needs.
  - Irrigation system status.

**SAFETY IN CONSTRUCTION**

CONSTRUCTION ACTIVITY CAN BE HAZARDOUS. POTENTIAL SAFETY HAZARDS CONSIDERED BY THE DESIGNERS TO HAVE A HIGHER RISK THAN NORMAL CONSTRUCTION ACTIVITY ARE IDENTIFIED WITH APPROPRIATE NOTES ON THESE DRAWINGS. IT SHOULD BE NOTED THAT DESIGNERS HAVE A LOWER UNDERSTANDING OF THE RISKS INVOLVED IN CONSTRUCTION COMPARED WITH THAT OF A COMPETENT CONTRACTOR. IT IS THEREFORE ESSENTIAL THAT AN ADEQUATE SAFETY PLAN FOR THE WORKS IS PREPARED BY THE CONTRACTOR. SAFETY PLANS ARE TO BE PREPARED IN COMPLIANCE WITH THE STATUTORY REQUIREMENTS. THE DESIGNERS MAY NOT BE AWARE OF ALL SAFETY RISKS AND HAZARDS INVOLVED IN THIS PROJECT AND THE ABSENCE OF COMMENT DOES NOT IMPLY THAT THERE ARE ONLY LOW LEVEL RISKS OF HAZARDS INVOLVED IN THE PROJECT. APPROPRIATE WORK METHOD STATEMENTS ARE TO BE PREPARED FOR ANY HIGH RISK ACTIVITY BY THE CONTRACTOR. THE DESIGNERS ARE AVAILABLE TO BE CONSULTED WHEN REQUIRED CONCERNING THEIR AREA OF CONTROL WITH REGARD TO SAFETY PLANS.

## 4.10 Detailed Revegetation Design

The screenshots on the following pages are extracted from *Section 2 of the Revegetation Plan Verterra.pdf*. These images outline the site boundaries for the revegetation works and highlight the specific areas designated for planting. The zones correspond to guidelines regarding tubestock planting.

Table 7: Revegetation zones

Zone Location	Grade	Treatment Area (m <sup>2</sup> )
Lower Bank	1v:3h	5,238 <sup>[1]</sup>
Upper Bank	1v:3h	7,204 <sup>[1]</sup>
Overbank	Natural ground level	4,873

<sup>[1]</sup> Reprofiled zone treatment areas are based on estimated batter surface areas calculated from assumed slope grade.
